**gjuhasz wrote:**  
...Maybe the laws/regulations at your location restrict the downloadable content, i.e., allow downloading the stable version only, even if the link seems to be different.

Seems so, because those links you posted take me to the same page, and don't take me to the pages you are taken to.  
might you download the file, and give it to me some other way?

**tallboy wrote:**  
Sylvander, I would be grateful if you could go through he details...

Simple explanation:  
1.  
a. Once running Grub4Dos...  
You tell it which partition [on the Flash drive] to install to...  
And...  
b. Tell Grub4Dos to only search the Flash Drive [for the OS] whilst loading.  
c. click OK on all other windows.

2. If the above isn't detailed enough, I'll need to go through the process of...  
a. Partitioning and formatting the Flash Drive, and setting the boot flag on the partition.  
b. Copying the Puli files to the ext4 partition on the Flash Drive.  
c. Running Grub4Dos, and writing notes on paper of all of the steps [ugh].  
.....  
Then noting/listing in detail here, all of those steps.

Please find it here:  
[www.smokey01.com/gjuhasz/temp](http://www.smokey01.com/gjuhasz/temp)

I need to delete it from my site in 2 days.

Have fun!  
Regards,  
gjuhasz

Got it downloaded, and tested against md5sum OK.  
Will do the necessary tomorrow I hope.

No, no, I've done most other things hundreds of times over the years! 😊  
I just wondered if there were special considerations to take when setting up Grub. Thank you for your guidance, Sylvander.

a. Installed **google-chrome-unstable\_current\_1386.deb**, and tried to restart the web-browser [which I'd closed prior to the install] by clicking the "Browse" icon, BUT...  
It wouldn't restart. 😊  
So...  
b. Rebooted.  
Once back into the Puli desktop, clicking "Browse" started version 44.0.2403.157 of the web-browser.  
c. Any idea what went wrong?

<b>gjuhasz</b>	D Posted: Mon 09 Nov 2015, 11:12 Post subject: Where to find Puli packages
----------------	--

Dear tallboy,  
Thanks for noticing me - it was my fault. 😊

In the meantime, I moved my packages from smokey01.com/gjuhasz/sfs to the below link, which is OK now:  
<http://www.smokey01.com/gjuhasz/packages/>

The folder behind the old link includes a pointer to the actual one. I corrected my previous posts accordingly.  
Sorry for the inconvenience.

Have fun!  
Regards,  
gjuhasz

It wouldn't restart. 😊

It seems that the 20151103-optional.tar.gz was not installed correctly. Please reinstall it by following the steps as we discussed on Page 8 of this thread.  
(Don't forget to select "Copy" instead of "Move")

However, this optional package is not necessary in your country while downloading beta and dev packages is restricted.

Have fun!  
Regards,  
gjuhasz

<b>Sylvander</b>	D Posted: Tue 10 Nov 2015, 13:39 Post subject: Re: Updates and downloads Subject description: How to merge the content of updates with their counterpart on the pendrive
------------------	---

**gjuhasz wrote:**  
...repeat the above procedure for 20151103-optional.tar.gz, too. In this case, the contents of the **patch** (again) and the **profiles** folder will be merged with their counterpart on the pendrive.

a. DONE.  
...And I think I did it correctly this time, due to improved understanding of what I was attempting. 😊  
Now to go to instructions on how to test this.

b. **FAIL!** 😊  
1. Closed the web-browser.  
2. Installed **google-chrome-unstable\_current\_1386.deb**  
3. Clicked "Browse" icon on desktop.  
No browser ran. [Unable to run browser by any other means I tried]  
4. Rebooted without saving changes [no backup].  
5. Once back into Puli desktop...  
Clicked "Browse" icon, and...  
There was displayed a warning that began:  
"No run action specified for files of this type (application/x-shellscrip)...."

----------------	---

**Sylvander wrote:**  
No run action specified for files of this type

Dear Sylvander,  
Finally, I could reproduce the problematic behavior.

The root of the problem is that you have ext4 filesystem on your pendrive while I tested the update packages with FAT32 😊

For this case, the main difference is that FAT32 does not handle the Linux permissions thus each file copied there gets rwx-r-x (755).

For some funny reason, those scripts did not have executable permission when I compressed them into 20151103.optional.tar.gz (in my tests they turned to be executable automatically).  
Consequently, this property remained unaltered in your ext4 system. 😊

In the meantime I corrected the permissions. You can download the updated package at [http://smokey01.com/gjuhasz/Puli-6.0.4\\_Oct2015/updates/20151103-optional.tar.gz](http://smokey01.com/gjuhasz/Puli-6.0.4_Oct2015/updates/20151103-optional.tar.gz).

Please check whether those files, e.g., `/usr/local/bin/defaultbrowser` are excluded from your backups.

FYI: I updated the test.tar.gz file, too. Now it contains the latest beta and dev versions.

PM sent.  
Have fun!  
Regards,  
gjuhasz

<b>Sylvander</b>	D Posted: Fri 13 Nov 2015, 05:30 Post subject:
------------------	--

1. "You can download the updated package at [http://smokey01.com/gjuhasz/Puli-6.0.4\\_Oct2015/updates/20151103-optional.tar.gz](http://smokey01.com/gjuhasz/Puli-6.0.4_Oct2015/updates/20151103-optional.tar.gz)."  
a. Downloaded this updated package, and did the appropriate stuff with it [I'm confident I know what to do] as with the old package, but the end result was exactly the same as before [same warning]. 😊

2. "Please check whether those files, e.g., `/usr/local/bin/defaultbrowser` are excluded from your backups."  
a. How should I do that?  
I just now clicked on my backup file and a list of contents was presented in an XArchiver window.  
Included in that list was a folder named `/usr/local/bin/...`  
Plus lots of files listed, but none that I could see beginning `/usr/local/bin/`.  
Does that mean `/usr/local/bin/defaultbrowser` are excluded?  
And is that good or bad?

3. "I updated the test.tar.gz file, too. Now it contains the latest beta and dev versions."  
a. I'm losing the plot!place...  
I have the old copy of test.tar.gz, but cannot remember where I got it or what it's for, and what I did with it.  
Where is the post giving instructions, and where's the file?

4. "PM sent."  
a. ...And read.  
b. As you saw from our text communication using Skype, I was able to get Skype running in Puli [only by using a command, but not by using the menu entry]...  
But so far unable to get my USB mic and camera functioning.  
I've had them working previously with skype, but I think that was in Windows.  
I've not recently used them with Puppy, but I know I had them working with Puppy some time back...  
I'm not experienced using Skype, or mic and camera.  
c. I tried testing the mic, the Skype system [announcement etc] appeared to work, but I got no playback from the web = failure.  
Used Retrovol "Full window" to check settings without success [I'm inexperienced].

------------------	--

1. Copied **firefox-p.pet** into the `/mnt/sdb1/packages` folder, and I have that loading at Startup.

2.  
a. Ran "Menu->Internet->Firefox (root)" [Firefox (spot) also available], and posting from that now, so at least I have SOME web-browser I can use.  
Firefox [which?] also runs if I click "Browse".  
b. Problem is: the opening window [and some of the titles in the others]...all in Hungarian methinks.  
Otherwise, it seems OK.

**Sylvander wrote:**  
But so far unable to get my USB mic and camera functioning.

Yesterday I installed a new USB headset in Puli, and the camera worked, too.  
So, I am wondering if I can help... let me know the type of your headset. Thanks.

Have fun!  
Regards,  
gjuhasz

<b>Sylvander</b>	D Posted: Fri 13 Nov 2015, 17:17 Post subject:
------------------	--

1. Headset:  
Plantronics Gamecom.  
a. Plantronics Gamecom 367  
b. Connection:  
2 off 3.5mm jacks, one for mic, one for earphones.  
Inclined to not use the mic on this because the Logitech standalone mic is probably better [ambient noise cancellation], and whatever works will win.  
I have the earphone jack connected to the amplified output on my speaker set [mutes the speakers which is useful], but the speaker set connected to the 3.5mm speaker output at the back of the desktop unit.

2. Microphone:  
Logitech A-0186A  
USB connection.

3. Camera:  
Logitech Webcam C120  
USB connection.
