package Fr is really well done... There is no English word lost here and there. Merci to the french team that does this huge work for our french speaking Puppy users (most of them should not use Puppy if not translated).
Hungarian team has translated ToOpPy 2 to HU ??? H!
I like hungarian Puppies.. nice remasterizations.
Passenger Pelo I don't ask him to repair the aircraft. Don't use him as a demining dog pleasease.

From <https://github.com/dirtycow/dirtycow.github.io/wiki/VulnerabilityDetails>:
Impact
- An unprivileged local user could use this flaw to gain write access to otherwise read-only memory mappings and thus increase their privileges on the system.
- This flaw allows an attacker with a local system account to modify on-disk binaries, bypassing the standard permission mechanisms that would prevent modification without an appropriate permission set.
For Puppy linux, this kernel bug can be ignored because
1. most of the processes run by root as the default user is root
2. cannot be activated by remote users until they break in the system in another way.
However, a browser can be infected by a malicious code to activate this exploit if it runs as spot.
I reckon that Puli (see <http://murga-linux.com/puppy/viewtopic.php?t=96964>) provides more defense thus it can successfully block the effect of a hacker attack which tries to utilize DirtyCow.
- First, because exploits attacking based on DirtyCow mostly want to access to the disks - but, as you know, the pendrive can be unplugged and the hard disks are rarely mounted.
- Second, because, especially in its Lazy profile, Puli makes the /bin folder inaccessible thus those utilities remain hidden during browsing.
Note that the demo exploits such as <https://www.youtube.com/watch?v=K5shE7m7aE> actively use the /bin folder.

Have fun!
Regards,
gjuhasz

gjuhasz , what about Cd player, Gnome-Mplayer fails to list songs . Could you take a glance at it, on Puli 6.0.5
I decided to continue with the precise version of Puli, because of MPEG available and I really enjoy this version. 🙄
Passenger Pelo I don't ask him to repair the aircraft. Don't use him as a demining dog pleasease.

gjuhasz , what about Cd player
Dear Pelo,
Puli 6.0.5 does not include mplayer. CDs can be listened either with DeadBeef or VLC.
If you have a CD in the tray, you see a CD icon among the drives - labeled probably sr0.
1. Play with DeadBeef:
Click on the CD icon to open DeadBeef.
Select File > Add Audio CD. The playlist appears.
Click on the Play icon in the toolbar.
2. Play with VLC:
Click on the Play desktop icon. VLC opens.
Select Media > Open Disc. In the Disk selection tab, select Audio CD and click Play.
The playlist appears, playing starts.
See the attached picture.
FYI: You can use Asunder for ripping the CD.
Have fun!
Regards,
gjuhasz

mercii gjuhasz it's a pleasure to be a tester with an hungarian devs. 🙄 as you.
Puli is stored in my Masters directory now.. Protected !
I will do my best for Puli success.
Passenger Pelo I don't ask him to repair the aircraft. Don't use him as a demining dog pleasease.

Dear Puli users,
I am proud to announce Puli 6.1.0.
Available at http://smokey01.com/gjuhasz/Puli-6.1.0_Apr2017/ link.
Download instructions and detailed description of the new version can be found at <http://www.smokey01.com/gjuhasz/readme.html> and at the first post.
Changelog:
- Folder encryption/decryption in the Right-click menu
- Auto-encrypted and smartaved /root/.my-documents/Secret folder
- .rpm packages acceptable for smartload
- .tar:z packages acceptable for smartload (can be encrypted)
- Any number of .deb packages are smartloadable
- .pet and .deb postinstall scripts executed during smartload
- New methods in rigorous and crazy security profiles
- Browser handling fully rewritten - optimized
- Multiple browser windows available
- Official "factory default" packages to be used for Iron, Slimjet, Vivaldi, and Opera
- Puli specific packages only for Firefox and Mozilla Light
- Chrome browser not supported any more (as there is no 32-bit Chrome)
- Common pepperflash and flashplayer plugin for all browsers
- h264/mpeg4 codecs available (Slimjet, Vivaldi and Opera need extra ffmpeg codec package)
- New default apps: nomacs replaces A2Panther; desktop icon starts SimpleScreenRecorder / XvidCap; zip icon opens Packit

Have fun!
Regards,
gjuhasz

@ gjuhasz,
Thanks for another great release of Puli. I am testing it on a new very low cost 11 inch laptop, a Lenovo 110S that was being sold at Best Buy for only \$110 last week, brand new, lowest cost new laptop I have ever seen. It comes with Windows 10, but I want to run Puli instead as I do with my other computers. Saw on Ubuntu forums that another person with same model installing Linux and did not mention any issues. I do have mine dual boot on USB, all works except that frsbee does not detect the internal wifi interface. My work around for now is to plug in an old USB wifi adapter which is detected immediately and connects and runs fine with Puli.
Wonder if anyone knows the solution.

Dear Dpup, thanks for testing my new Puli.
Puli prefers Barry's Simple Network Setup to Jemimah's Frsbee. Have you tried it?
Unfortunately, the newest wifi cards are incompatible with 32-bit Linux having kernel 3.xx.xx.
My son bumped in the same issue with a new HP 250G laptop. Now he uses a nano size TP-Link TL-WN725N wifi dongle (he replaced the incompatible TL-WN727N to this one).
Older dongles such as Zyxel NWD 2105 are mostly OK..

Have fun!
Regards,
gjuhasz

Depending on the version, this adapter may be using the mt6701u driver. There is a forum section devoted to it. But it needs k4.x.

I attach a Puli 6.1.0 screenshot about the new Google Earth running smoothly in Slimjet 14.0.1.0 beta.
Nice and fast.

Have fun!
Regards,
gjuhasz

Two of my french colleagues need the hungarian files for XVkbd. I prefer that hungarian team itself answer their request here.
Puppy Linux family: a **high security**, "kiosk" flavor
Passenger Pelo I don't ask him to repair the aircraft. Don't use him as a demining dog pleasease.

Dear Pelo,
Added the Puli version of XVkbd there.
Its layout and behavior differs from the others. I added its icon in the tray or by typing **xvkbsec** in a terminal.
You can switch to other languages by modifying the content of /etc/X11/app-defaults/XVkbd file from

```
Code:  
#include "XVkbd-hu"
```

to, for example,

```
Code:  
#include "XVkbd-french"
```

The pet package is available at www.smokey01.com/gjuhasz/packages/XVkbd-puli.pet
Have fun!
Regards,
gjuhasz

Merci however. Tested with Puli, of course, Puli the old (🙄), Puli the adult version (🙄, with ffmpeg included) upup 3.8.3
IMO you should include Polish (made available on the forum by SFR). It would be nice to get an european package for all european languages, including English of course, which will remain The favorite.
No Brexit in Puppy Linux World
Write Magyar is not easy, but to speak Magyar will be years and years .. 🙄
Argolance's Workshop For ToOpPy Precise 5.7.1, a Puppy with Magyar included, with the help of Skamlinux team
Passenger Pelo I don't ask him to repair the aircraft. Don't use him as a demining dog pleasease.

Hello,
Many thanks for your package. 🙄
So now, we have got two XVkbd files, one from S-kami called XVkbd-hungarian , and another one from you, called XVkbd-hu.
Both are very different and I was wondering which choose to add to my (our) packages? Note that both can be added if needed and useful, Please fill free to give us some explanations on the 🙄 French Forum (XVkbd 3.7 + xvkb(jwmb)asconf + libs).
I asked the question to S-kami on his site, he answered:
Quote:
I wanna admit that, the first file was created by Janusga, and the second one made by Gjuhasz so i know nothing about this translation and choice...
@Pelo
"what will they do with it ? hum... be careful, keep an eye on it " 🙄
Nous avons en effet de très funestes deservues have indeed very fatal intentions.... 🙄
Cordialement.
