"svbakicant et svkôjvmbaicant sont deux petits utilitaires qui permettent de définir les principales options de configuration visuelle du Clavier Virtuel XVkbd 3.7 (inclus dans le paquet ainsi que les libs libXaw3d.so.8 et libXp.so.6)." two small scripts to improve visual of XVkbd, says Argolance in French.

Just add polish and the hungarian version will be enough.  
There are a lot of xvkbd pets, all working well. The plus of Argolance pet is in visual settings of the keyboard, based on TuOppy desktop by default, but you can change it  
And of course Magyar and Polish added as I was wishing for my personal use (European Puppy forums)  
Russian to see further days, and Czech too  
What can be an accurate usage : make pendrive as gift offered by a club or a firm, colorized with their logo colors, as advertisement object)  
Pendrive with your Puppy inside, of course.  
About Argolance pets, he has no testers, excepted Polo.. Try them too, before release in Hungary to thousands of users. There are still some bugs.  
puli.vkbasicinf-0.3..xvkbd-3.7.all.pet: 240 K (polish included, really)  
I hope your Puli new version will be tested by our famous french devs,

Last Argolance version 0.4

Passenger Pelo I don't ask him to repair the aircraft. Don't use him as a demining dog .... pleasee.

Dear Puli users,  
As you know, Pull can be installed on USB pendrives in different ways. Among them, I mention LILI as the easiest method.  
A forum member asked me whether this can be considered as a secure method as Windows versions (and also Wine) are potential targets of ransomware like WannaCry and Petya.  
The answer is yes, of course.  
If you want to use the Windows-based LILI:

First of all, be sure that your system is not infected by any malware.  
Second, I propose to use the (intact) LILI downloadable from my web folder <http://www.smokey01.com/gjuhasz/LILI>. Note that I added both MD5 and SHA checksum files to LILI.

For non-Windows users:  
Some USB install tools such as <http://www.xendriveline.com/liveusb-install-live-usb-creator> do not accept .zip but .iso file extension.  
No problem, download the Puli\_install.zip file from my web folder [http://www.smokey01.com/gjuhasz/Puli-6.1.0\\_Apr2017](http://www.smokey01.com/gjuhasz/Puli-6.1.0_Apr2017) then simply rename it to Puli\_install.iso. This renamed file will be accepted for installation.

Have fun!  
Regards,  
gjuhasz

Puli and Pelo ...  
Lili live usb creator is a nice tool, which I used a lot in the past..  
But you need to format your USB so to make it virgin.  
Grub4dos will install your Puli without erasing your files. Pelo idea, for his Puli  
Puli is a favorite, at home.  
Puli with KDE

Passenger Pelo I don't ask him to repair the aircraft. Don't use him as a demining dog .... pleasee.

Thank you for this idea, Pelo. There are other ways, however.  
You can use any FAT32 formatted USB stick to boot Puli in UEFI mode without deleting your existing files from it. Even the MBR and the ldlinux.sys file may remain there.

You can download the UEFI add-on package from [http://smokey01.com/gjuhasz/Puli-6.1.0\\_Apr2017/UEFI](http://smokey01.com/gjuhasz/Puli-6.1.0_Apr2017/UEFI) folder. More info in the readme.txt file and in the <http://murga-linux.com/puppy/viewtopic.php?t=109702> forum thread.

Note that the UEFI boot process first seeks the puppy\_puli\_6.1.0.fs file on your non-NTFS hard disk partitions. So, I propose to remove/rename them unless you want to boot Puli from your HDD (which works but this mode is not recommended).

Have fun!  
Regards,  
gjuhasz

I know very well **Lili Live USB creator**! It a nice GUI for install Puppy Linux or other Linux on an USB stick. I used it, I cannot deny it now.  
It's better than unetbootin. That is a fact.  
Puli 6.1.0 is provided as a ZIP 17-Apr-2017 17:26 1.3M. **That is perfect.**  
Unzip where you like, on a pendrive..  
1.3MB.... that is the problem... Could you do a light version, as you did with precise ?  
Topic Lili Live USB Creator, topic en Français.

Passenger Pelo I don't ask him to repair the aircraft. Don't use him as a demining dog .... pleasee.

Sorry, I don't understand your post. Do you mean 1.3 MB size of the 610\_hu folder?

Have fun!

I was drunken ??  
gjuhasz, when you inform that Puli is secured, that means that other Puppies are unsecured.  
How to break the wall to enter in Puli ? Just use another Puppy ... or ?

Passenger Pelo ! don't ask him to repair the aircraft. Don't use him as a demining dog .... pleasee.

**gjuhasz** DPosted: Mon 18 Sep 2017, 19:25 Post subject: gtk-3 in Puli  
Joined: 29 Sep 2008  
Posts: 422

Dear Puli users,  
As you know, some of the supported browsers, such as Iron and Firefox, now use gtk-3.

Please find the smartloadable gtk-3 package here:

\* <http://smokey01.com/gjuhasz/packages/gtk3.10.pet>

The latest Iron browser (version 60.0.3150.1) can be downloaded from

\* <http://www.srware.net/downloads/iron.deb>

The latest Puli-specific Firefox (version 55.0.3) package can be downloaded from:

\* <http://smokey01.com/gjuhasz/packages/firefox-5503p.pet>

Of course, both of them are smartloadable and run as spot.

Have fun!  
Regards,  
gjuhasz

Subject description: Diff package for testing  
Joined: 29 Sep 2008  
Posts: 422

Dear Puli users,  
I decided to refresh Puli to support the newest (Chromium 61+ based) browser versions.

Before releasing Puli 6.1.1, I collected the necessary packages (nss3.28.4 and gtk3.10) in a common, smartloadable diff file.

Available as [http://smokey01.com/gjuhasz/Puli-6.1.1\\_Oct2017/pulil610-611diff.pet](http://smokey01.com/gjuhasz/Puli-6.1.1_Oct2017/pulil610-611diff.pet).

Recommended browsers for testing:

-- Iron 61.0.3200.0 Stable for Linux <http://www.srware.net/downloads/iron.deb>  
-- Vivaldi 1.12.955.38 <https://downloads.vivaldi.com/stable/vivaldi-stable-1.12.955.38-1.1386.rpm>

Of course, you can run earlier browser versions after the diff file has been installed.

Have fun!  
Regards,  
gjuhasz

**gjuhasz wrote:**  
Before releasing Puli 6.1.1, I collected the updated packages

One step ahead: Puli 6.1.1 beta created from 610 and the latest diff package

The size will be smaller than its predecessor's.  
All browsers are OK. Some automatism for Palemon is in progress (however it cannot share the config files with Firefox 57 as it was possible previously).

Have fun!  
Regards,  
gjuhasz

**gjuhasz** DPosted: Tue 05 Dec 2017, 18:27 Post subject: Puli 6.1.1 beta for testing  
Subject description: diff files and example apps

Puli 6.1.1 beta is ready for testing.

I removed the diff package mentioned in the above posts and uploaded the main 6.1.1 files to the diff folder: <http://smokey01.com/gjuhasz/Pulil610-611diff>.

Replace the 6.1.0 files on your pendrive with their 6.1.1 counterparts then reboot your machine.

News:

- Puli auto-installs the .pet packages found in /root/pkgs2inst/ folder after X appears
- Recommended package for auto install: gtk3.10.pet
- The latest iron, slimjet, vivaldi and firefox browsers run smoothly. The FF59 (nightly HU package) is included in the diff fileset.
- Web skype used instead of the deprecated native skype client
- Improved scripts: defaultbrowser, defaulthtmlviewer, defaultchat, rc,local, etc.
- Security fixes, bug fixes
- Other security tricks will be announced soon.

Have fun!  
Regards,  
gjuhasz

**gjuhasz** DPosted: Wed 18 Jul 2018, 06:38 Post subject: Announcement: Puli 6.2.0  
Joined: 29 Sep 2008  
Posts: 422

Dear Puli users,  
I am proud to announce Puli 6.2.0.

Available at [http://smokey01.com/gjuhasz/Puli-6.2\\_Jul2018/](http://smokey01.com/gjuhasz/Puli-6.2_Jul2018/) link.

Installation instructions and detailed description of the new version can be found at <http://www.smokey01.com/gjuhasz/readme.html> and in the first post.

Changelog:

- \* Machine specific smartload procedure added
- \* Common and machine specific postload procedure added
- \* BootManager enabled
- \* New default apps for desktop icons
- \* New copyrighted background pictures (only for Puli-related usage)
- \* New methods while accessing the web
- \* Hard drives disabled in crazy security profile
- \* Browser handling further optimized
- \* Puli specific package for Firefox
- \* Pale Moon supported
- \* Web modules preferred (e.g., web-Skype, TeamViewer)

You can find more changes by comparing the readme files of Puli 6.0.2 and the earlier Pulis at <http://www.smokey01.com/gjuhasz>.

Have fun!  
Regards,  
gjuhasz

**gjuhasz wrote:**  
Installation instructions and detailed description of the new version can be found at <http://www.smokey01.com/gjuhasz/readme.html> and in the first post.

Service pack available at [http://smokey01.com/gjuhasz/Puli-6.2\\_Jul2018/ServicePack/](http://smokey01.com/gjuhasz/Puli-6.2_Jul2018/ServicePack/) folder.

Cumulated content:

Bug fixes:

- \* sfs\_load
- \* smartsave
- \* aligning display messages
- \* etc.

New features:

- \* supports Hunspell in AbiWord (enchant added)
- \* Multiple Secret folders can be used in /root/my\_documents/
- \* MIME types and scripts added to play some streaming videos (tsplayer, xspF2ts, application\_x-linguist, application\_x-xspf+xml)
- \* optical drives supported under wine (xp, wineCD)
- \* preferences changed in defaultmediaplayer (SMPlayer support added)

For more details, see [http://smokey01.com/gjuhasz/Puli-6.2\\_Jul2018/ServicePack/Readme-servicepack.txt](http://smokey01.com/gjuhasz/Puli-6.2_Jul2018/ServicePack/Readme-servicepack.txt)

Have fun!  
Regards,  
gjuhasz

Puli\_install zip updated with the Jul 24 Servicepack.pet, which became obsolete thus removed on Jul 28, 2018

Other news in the Jul 28 Puli package:

- \* youtube-dl added
- \* built-in vlc removed (due to gjuhasz's better compatibility with various video formats)

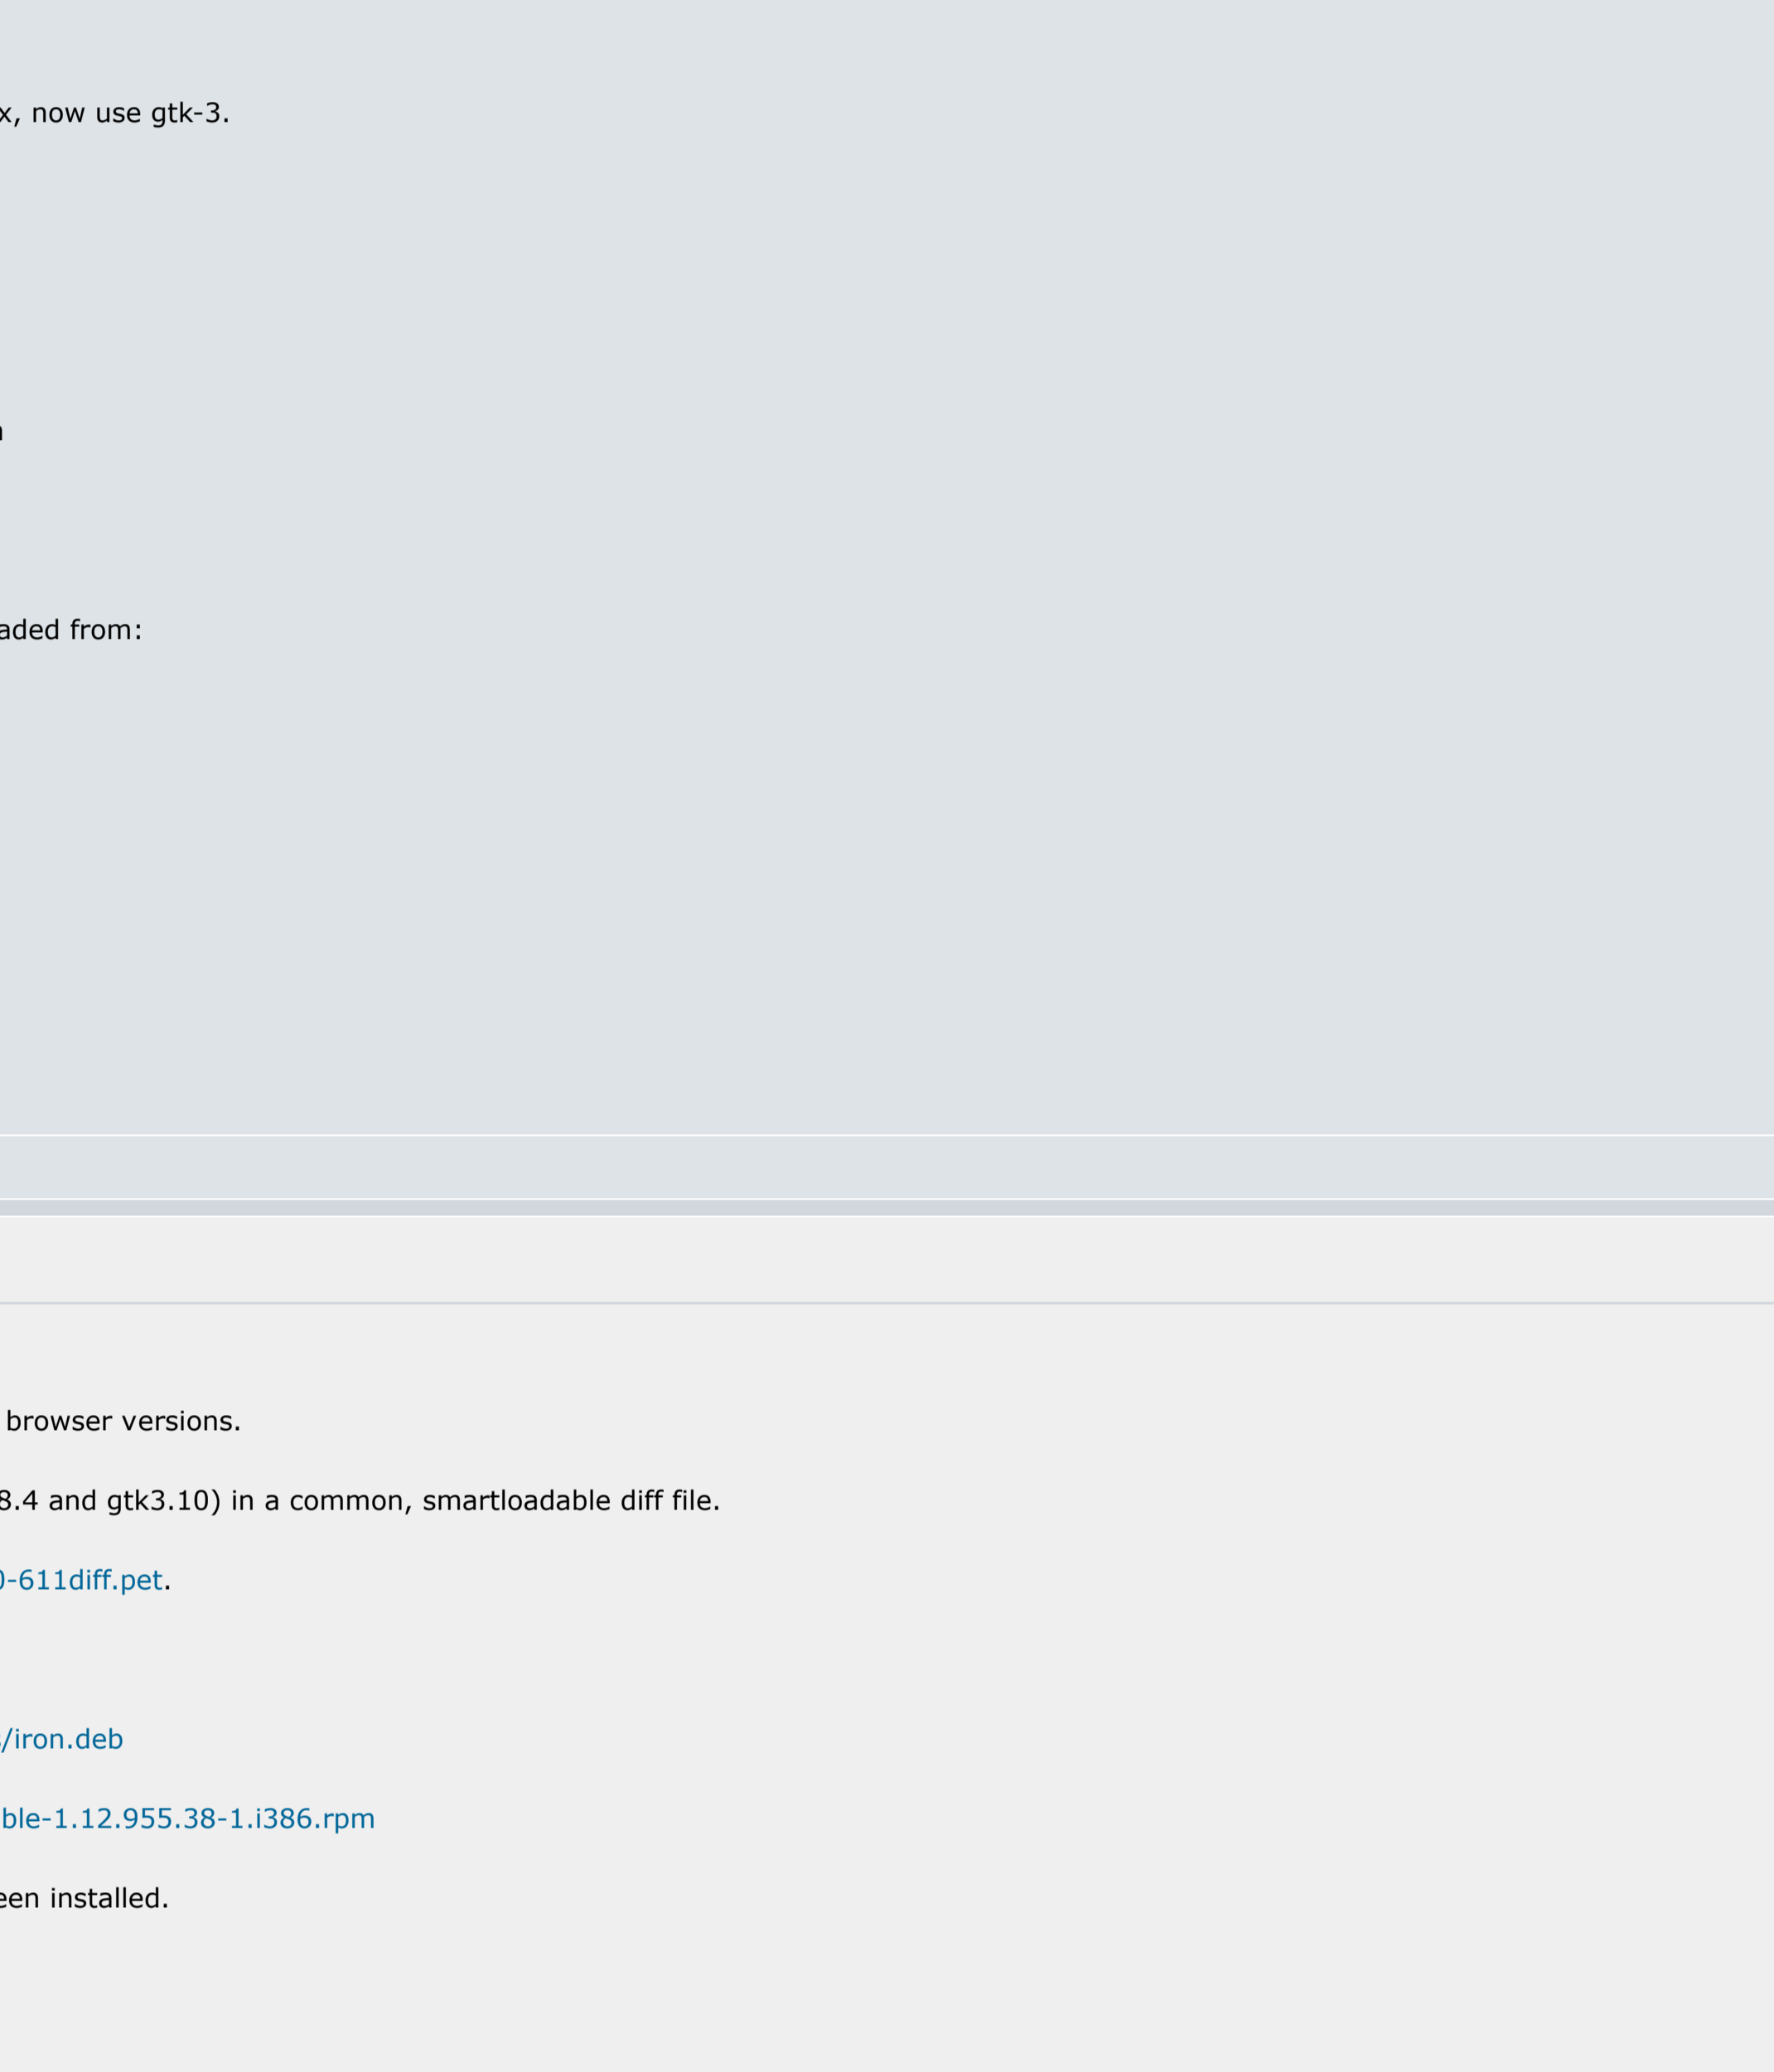

Have fun!  
Regards,  
gjuhasz
