**Author** Message gjuhasz Di Posted: Sun 14 Jun 2020, 08:16 Post subject: Re: Open banking secure ? **EBored wrote:** More secure for open banking, financial activity? How to prepare step by step? Joined: 29 Sep 2008 Posts: 422 Dear EBored, Puli has three security profiles beyond its default "Mild" one. The majority of the technical security measures are active during you are using a supported web browser. For example, see /usr/bin/netchecker for profiles Mild and Rigorous. Those protective actions can be easily tailored/extended by the users. Also, you can configure a specific firewall (e.g., by editing the selectable ones in Puli) and/or manually edit the /etc/hosts, /etc/suspicious hosts, /etc/friends files. Right-clicking on an executable file in Puli, e.g., on /usr/local/bin/defaultdict, provides options to run it in sandbox and /or configure the runtime parameters. Example A) Sending an executable to a sandbox (Firejail): 1. Right-click on /usr/local/bin/defaultdict file 2. In the pop-up menu, select *Run in Sandbox* Example B) You downloaded a video file and you want to run /root/spot/Downloads/myvideo.mp4 in a sandbox: 1. Right-click on /usr/bin/mpv and select *Apply Runtime Parameters* 2. In the blue Prefix popup, type firejail --noprofile then click Next 3. In the yellow Postfix popup, type /root/spot/Downloads/myvideo.mp4 (the absolute path of your video file) 4. Click Run However, fraud and other types of social engineering need more attention from the user on top of the technical security controls implemented. Concerning open banking, please carefully read the liability section in the contract proposed by a (potential) service provider and decide whether it is appropriate for you in cases of fraud. Please also read the Disclaimer part of *Readme-Puli\_packages.txt* at Puli's download page

Profile De PM **Back to top** gjuhasz D Posted: Wed 17 Jun 2020, 13:37 Post subject: Announcement: Puli 7.3

https://sourceforge.net/projects/puppyszoftver/files/Puli/:

I am proud to announce the new, 64-bit Puli 7.3 release.

The new features of 7.3 include:

- packages in .tar.bz2 (e.g., Firefox) and .tar.xz (e.g., Blender) can be smartloaded (their unpacked structure will appear in /opt/ folder)

The main files are available at https://sourceforge.net/projects/puppyszoftver/files/Puli-64bit/Puli-7.3\_Apr2020/

Installation instructions and detailed description of the new version can be found at the first page of this forum thread.

- built-in Switch to Mild/Rigorous/Crazy feature (in the Settings menu)

- one-click support for *Firefox* updates

- sandboxed Firefox available in *Lazy* profile

- additional/updated bulit-in modules (Take a Gif!, pmcputemp, xorg-autoconf, packit, uextract, etc) Kudos to forum members listed in those packages. - updated references (adblock list, libraries, browser bookmarks, etc) - bug fixes (get\_libreoffice, rc.local, etc).

I also uploaded many Puli 7.3 compatible packages to https://sourceforge.net/projects/puppyszoftver/files/Puli/Puli-64bit/packages

(You can browse the list of files added in 2020)

-You can track the evolution of the Puli versions by browsing this forum thread and/or by comparing the readme files at http://www.smokey01.com/gjuhasz.

For Hungarian users: The Hungarian flavor of Puli 7.3 is available at SourceForge as

https://sourceforge.net/projects/puppyszoftver/files/Puli/Puli-64bit/Puli-7.3\_Apr2020/Puli7\_iskola.zip.

Have fun!

Regards,

gjuhasz

Di Posted: Tue 30 Jun 2020, 18:07 Post subject: MuseScore variants Dear Puli users,

I uploaded MuseScore-3.4.2-x86\_64.AppImage to

https://sourceforge.net/projects/puppyszoftver/files/Puli/Puli-64bit/packages

However, I recognized that the MuseScore AppImages (even the earlier ones) segfault on some old machines, e.g., on my HP Compaq DC 7600 SFF (Intel® P4, 3GB, Radeon graphics) while they run smoothly on newer ones such as my HP Elitebook 850 G6 (8th Generation Intel® Core™ i7, 16 GB).

So, I decided to assemble a 64-bit sfs package from MuseScore-2.0.3 with some features of v3.4.2. Successfully tested with Puli7.3 on all my machines then uploaded to the above folder. Have fun!

Regards,
